

SSAS 2014, Part 02 of 10: Using SQL Server Data Tools

page 1

Meet the expert: Using Microsoft SQL Server started for Thomas with a Laboratory Information System in version 6.5. The Analysis Service (also called SSAS) option in version 7 got him excited about Data Warehousing, but before he used a production version of SSAS, he became a Database Administrator for versions 6.5 through 2005 while working at a paper mill and home health agency. After writing reports as an application developer for 10 years, he rediscovered Online Analytical Processing (OLAP) implemented into Data Warehouses. Since 2009, he has become a speaker in the SQL Server community and a voice for Microsoft Business Intelligence (MSBI) for enterprises. His transition from Sr. DBA to a Business Intelligence Architect has been a great career path. Thomas has certifications MCP, MCDBA and MCITP in Database Administration and Business Intelligence.

Prerequisites: This course does not require any prior experience with Analysis Server. It is assumed that students have working experience with SQL Server; basic relational database concepts (e.g., tables, queries, and indexing); data transformation services.

Runtime: 01:25:30

Course description: In this course, you will learn how to use Microsoft SQL Server 2014 Analysis Services (SSAS). This course includes concepts, procedures and practices based on real-world experience giving both the novice and experienced SQL Server developer the tools to build data warehousing and decision support system solutions.

Course outline:

Using SSDT to Build a Project

- Introduction
- Understanding SSDT
- Demo: SQL Server Data Tools
- Summary

- Summary

Using SSDT to Refine a Cube

- Introduction
- Refining Measures
- Demo: Refining Measures
- Demo: Measure Groups
- Summary

Using SSDT to Build Data Source

- Introduction
- Creating a Data Source
- Demo: Connect to Data Source
- Building the Data Source View
- Demo: Data Source View
- Demo: Calculated Column
- Summary

Using SSDT to Build Dimensions

- Introduction
- Using Dimension Wizard
- Demo: Create a Dimension
- Demo: View Dimension
- Summary

Using SSDT to Build a Cube

- Introduction
- Adding Measures w/ Cube Wizard
- Demo: Create New Cube
- Demo: Cube Designer
- Summary

Using SSDT to Refine Dimension

- Introduction
- Refining the Project
- Refining Dimensions
- Demo: Dimension Designer
- Demo: Hierarchy
